

Did You Know?

CSS was introduced in 1996 by the World Wide Web Consortium (W3C) to separate webpage design from HTML structure.

What is CSS?

CSS stands for **Cascading Style Sheets**. It is used to style HTML webpages by changing colors, fonts, layouts, spacing and animations. CSS makes webpages attractive and responsive.

Why do we use CSS?

- Add colors to webpages
- Change fonts and text styles
- Create responsive layouts
- Add animations and effects
- Improve user experience

Features of CSS

- Easy to Learn
- Reusable Styles
- Responsive Design
- Improves Website Appearance
- Works with HTML and JavaScript

CSS Syntax

```
selector {  
  property: value;  
}  
  
Example:  
  
h1{  
  color:blue;  
  font-size:40px;  
}
```

Types of CSS

Type	Description
Inline CSS	Written inside HTML tag using style attribute
Internal CSS	Written inside <style> tag
External CSS	Written in separate .css file

Example

```
h1{  
  color:red;  
}  
  
p{  
  font-size:20px;  
}
```

Advantages of CSS

- Professional webpage design
- Less code repetition
- Easy maintenance
- Fast webpage loading
- Responsive websites

Limitations of CSS

- Different browser support
- Complex layouts need practice
- Animations may affect performance
