

Did You Know?

Every HTML element is treated as a rectangular box in CSS. This is called the CSS Box Model.

What is CSS Box Model?

The CSS Box Model is used to understand how much space an HTML element occupies. Every element consists of Content, Padding, Border and Margin.

Parts of CSS Box Model

Part	Description
Content	Main text or image inside the element
Padding	Space between content and border

Border	Line around the padding
Margin	Outer space outside the border

Box Model Structure

Margin

Border

Padding

Content

Example

```
div{  
width:300px;  
padding:20px;  
border:2px solid black;  
margin:30px;  
}
```

Important Properties

Property	Purpose
width	Sets element width
height	Sets element height
padding	Inner spacing
border	Creates border
margin	Outer spacing

Advantages

- Creates proper spacing
- Improves webpage layout
- Makes design clean
- Easy element positioning
- Professional webpage appearance

Common Mistakes

- Confusing padding with margin
- Ignoring border size
- Using too much margin

- Incorrect width calculations

Interview Questions

Q1: What are the four parts of the CSS Box Model?

Content, Padding, Border and Margin.

Q2: Which property creates inner spacing?

padding

Q3: Which property creates outer spacing?

margin

Q4: Which property draws a line around an element?

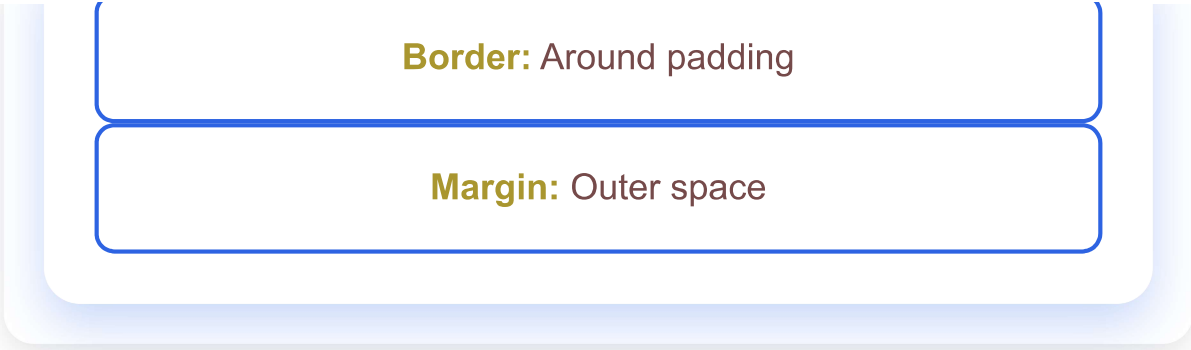

border

Quick Revision

Content: Main element data

Padding: Inner space

The diagram consists of two nested rounded rectangles. The outer rectangle has a blue border and contains the text 'Margin: Outer space'. Inside it, a smaller rectangle has a blue border and contains the text 'Border: Around padding'. This visualizes how padding is the space between the content and the border, and the margin is the space between the border and the next element.

Border: Around padding

Margin: Outer space
