

Did You Know?

CSS Grid is one of the most powerful layout systems in CSS. It allows developers to create professional two-dimensional webpage layouts.

What is CSS Grid?

CSS Grid is a layout system used to organize webpage elements into rows and columns. It helps create modern, responsive and professional webpage designs.

Why do we use CSS Grid?

- Create complex layouts easily
- Arrange items in rows and columns
- Build responsive websites
- Reduce layout code

- Improve webpage structure

Important CSS Grid Properties

Property	Purpose
display:grid	Creates a Grid container
grid-template-columns	Defines number of columns
grid-template-rows	Defines number of rows
gap	Adds space between grid items
justify-items	Aligns items horizontally
align-items	Aligns items vertically

Example

```
.container{  
  display:grid;  
  grid-template-columns:1fr 1fr 1fr;  
  gap:20px;  
}
```

Common Grid Properties

Property	Example
grid-template-columns	1fr 1fr 1fr
grid-template-rows	100px 100px
gap	20px
grid-column	1 / 3
grid-row	1 / 2

Advantages

- Professional layouts
- Easy row and column management
- Responsive design
- Less CSS code
- Easy alignment

Common Mistakes

- Forgetting display:grid
- Incorrect column values
- Ignoring gap property
- Using Grid where Flexbox is better
