

Did You Know?

More than 60% of internet users browse websites using mobile devices. Responsive Design makes websites look good on every screen size.

What is Responsive Design?

Responsive Design is a web design technique that makes webpages automatically adjust to different screen sizes such as mobiles, tablets and desktops.

Why do we use Responsive Design?

- Support all screen sizes
- Improve user experience
- Create mobile-friendly websites

- Increase website accessibility
- Improve SEO ranking

Important Responsive Design Concepts

Concept	Description
Media Queries	Apply CSS for different screen sizes
Viewport	Controls webpage scaling on devices
Flexible Layout	Uses percentages instead of fixed sizes
Flexible Images	Images resize automatically
Mobile First	Design starts from mobile screens

Example

```
@media (max-width:768px){  
  body{  
    background-color:lightblue;  
  }  
}
```

}

Common Breakpoints

Device	Screen Width
Mobile	Up to 768px
Tablet	769px - 1024px
Desktop	Above 1024px

Advantages

- Mobile-friendly websites
- Better user experience
- Improved SEO
- Professional design
- Easy maintenance

Common Mistakes

- Not using viewport meta tag
- Using fixed widths
- Ignoring mobile users
- Too many media queries
