

Chapter 10

CSS Best Practices

[Open Chapter →](#)

Did You Know?

CSS was created by **Håkon Wium Lie** in 1996. It is used to style and design web pages.

Introduction to CSS

CSS (Cascading Style Sheets) is a styling language used to make web pages beautiful and attractive. It controls colors, fonts, layouts, spacing and responsive designs.

What is CSS?

CSS is used together with HTML to improve the appearance of websites. HTML creates the structure, while CSS controls the presentation and design.

Features of CSS

- Separates content from design
- Creates attractive web pages
- Supports responsive design
- Provides animations and transitions
- Works with HTML and JavaScript

Did You Know?

CSS was created by **Håkon Wium Lie** in 1996. CSS is used to style and design modern websites.

Introduction to CSS

CSS (Cascading Style Sheets) is a styling language used to control the appearance of web pages. It is used for colors, fonts, layouts, spacing and responsive designs.

What is CSS?

CSS works with HTML to make websites attractive and user-friendly. HTML creates the structure of a webpage, while CSS controls its design.

Features of CSS

- Separates content from design
- Creates beautiful layouts
- Supports responsive websites
- Adds animations and transitions
- Works with HTML and JavaScript

Types of CSS

There are three main types of CSS:

- **Inline CSS:** CSS written inside an HTML element.

- **Internal CSS:** CSS written inside the style tag.
- **External CSS:** CSS written in a separate CSS file.

CSS Selectors

CSS selectors are used to select HTML elements and apply styles to them.

Examples

```
p {  
  color: blue;  
}  
  
.heading {  
  font-size: 30px;  
}  
  
#box {  
  background: red;  
}
```

CSS Box Model

Every HTML element is considered a box. CSS box model consists of:

- Content
- Padding

- Border
- Margin

Flexbox

Flexbox is a CSS layout system used to arrange elements in rows or columns. It helps create flexible and responsive designs.

Common Flexbox Properties

- `display:flex`
- `justify-content`
- `align-items`
- `flex-direction`

CSS Grid

CSS Grid is a layout system used to create complex webpage layouts using rows and columns.

CSS Animations

CSS animations allow elements to change their style gradually without using JavaScript.

Responsive Design

Responsive design makes websites work properly on mobile phones, tablets and desktop screens. Media queries are commonly used for responsive designs.
