HTML Chapter 2

HTML Tags & Elements

Learn HTML Tags, Elements and Attributes with easy explanations and examples.

Did You Know?

Every HTML webpage is made up of Tags and Elements. Without tags, a browser cannot understand what to display.

What are HTML Tags?

HTML Tags are predefined keywords enclosed inside angle brackets (< >). They tell the browser how to display content on a webpage. Most HTML tags have an opening tag and a closing tag.

Example of HTML Tags

```
<h1>Welcome</h1>  
  
<p>This is a paragraph.</p>  
  
<a href="https://google.com">Google</a>
```

What is an HTML Element?

An HTML Element consists of: Opening Tag + Content + Closing Tag. Example:

```
<p>  
Hello Noor  
</p>
```

The complete paragraph is called an HTML Element.

What are HTML Attributes?

HTML Attributes provide extra information about HTML Elements. They are always written inside the opening tag.

```

```

Common HTML Attributes

Attribute	Purpose
href	Defines a hyperlink
src	Specifies image path
alt	Alternative image text
class	Assigns CSS class
id	Unique element identifier
style	Inline CSS

Types of HTML Tags

- **Paired Tags** → Have opening and closing tags.
- **Empty Tags** → Do not require a closing tag.

Examples of Empty Tags

```
<br>  
<hr>  
<img>  
<input>
```

Advantages of HTML Tags

- Easy to understand
- Help organize webpage content

- Supported by every browser
- Easy to combine with CSS & JavaScript
- Improve webpage structure

Common Mistakes

- Forgetting closing tags
- Incorrect nesting of tags
- Missing quotation marks in attributes
- Typing wrong tag names

Interview Questions
