

Did You Know?

HTML Tables organize data into rows and columns, while HTML Lists help display related items in a structured way.

What are HTML Lists?

HTML Lists are used to display multiple related items in an organized format. There are three types of HTML Lists.

Types of HTML Lists

List Type	Tag
-----------	-----

Ordered List	
Unordered List	
Description List	<dl>

Ordered List Example

```
<ol>  
<li>HTML</li>  
<li>CSS</li>  
<li>JavaScript</li>  
</ol>
```

Unordered List Example

```
<ul>  
<li>Apple</li>
```

```
<li>Banana</li>  
<li>Orange</li>  
</ul>
```

Description List Example

```
<dl>  
<dt>HTML</dt>  
<dd>Markup Language</dd>  
</dl>
```

What is an HTML Table?

An HTML Table is used to display information in rows and columns.

Important Table Tags

Tag	Purpose
<code><table></code>	Create Table
<code><tr></code>	Table Row
<code><th></code>	Table Heading
<code><td></code>	Table Data

Table Example

```
<table>
<tr>
<th>Name</th>
<th>Age</th>
</tr>
<tr>
<td>Noor</td>
```

```
<td>20</td>  
</tr>  
</table>
```

Advantages

- Display data clearly
- Organize information
- Easy to read
- Create menus using lists
- Improve webpage structure

Common Mistakes

- Forgetting to close table tags
- Using td instead of th for headings

- Incorrect nesting of rows
- Missing li tags inside lists
