# What is HTML?

HTML is not a programming language. It is a markup language used to organize text, images, links, tables and forms on a webpage.

## Features of HTML

- Easy to Learn
- Platform Independent
- Supported by all Browsers
- Works with CSS & JavaScript
- Free to Use

## Example

```
<!DOCTYPE html>  
<html>
```

```
<head>
<title>My Website</title>
</head>
<body>

<h1>Hello Noor!</h1>

</body>
</html>
```

## Quick Revision

### Exam Revision

**HTML Full Form:** HyperText Markup Language

**Purpose:** Used to create web pages.

**Latest Version:** HTML5

**Works With:** CSS & JavaScript

## HTML Document Structure

Every HTML document follows a basic structure. It starts with `<!DOCTYPE html>` , followed by the `<html>` , `<head>` , and `<body>` tags.

### Basic Structure

```
<!DOCTYPE html>
<html>

  <head>
    <title>My Website</title>
  </head>

  <body>
    Content goes here
  </body>

</html>
```

## Headings and Paragraphs

HTML provides six heading tags, from `<h1>` to `<h6>` . The `<h1>` tag is the largest heading, while `<h6>` is the smallest.

The `<p>` tag is used to create paragraphs and display normal text on a webpage.

### Example

```
<h1>Main Heading</h1>

<h2>Sub Heading</h2>

<p>This is a paragraph.</p>
```

## HTML Lists

HTML provides different types of lists to organize information clearly. The main types are Ordered Lists, Unordered Lists and Description Lists.

### 1 Ordered List

An ordered list displays items with numbers. It uses the `<ol>` tag.

```
<ol>
  <li>HTML</li>
  <li>CSS</li>
```

```
<li>JavaScript</li>
</ol>
```

## 2 Unordered List

An unordered list displays items with bullet points. It uses the `<ul>` tag.

```
<ul>
  <li>HTML</li>
  <li>CSS</li>
  <li>JavaScript</li>
</ul>
```

### Exam Tip

Remember:

- `<ol>` = Numbered List
- `<ul>` = Bullet List
- `<li>` = List Item

## HTML Links

HTML links are created using the `<a>` tag. They allow users to navigate from one webpage to another.

### Example

```
<a href="https://www.google.com">  
Visit Google  
</a>
```

## HTML Images

Images are displayed using the `<img>` tag. The `src` attribute specifies the image path, while `alt` provides alternative text.

### Example

```

```

### Exam Tip

**href** → Link address

**src** → Image location

**alt** → Alternative text if image cannot load

## HTML Tables

HTML tables are used to display data in rows and columns. The main tags used are `<table>` , `<tr>` , `<th>` and `<td>` .

### Example

```
<table border="1">

<tr>
  <th>Name</th>
  <th>Age</th>
</tr>

<tr>
  <td>Noor</td>
  <td>20</td>
</tr>

</table>
```

### Exam Tip

**<table>** = Creates a table

**<tr>** = Table Row

**<th>** = Table Heading

**<td>** = Table Data

## HTML Forms

HTML forms are used to collect information from users. They are commonly used for login pages, registration forms, contact forms and surveys.

### Example

```
<form>

<label>Name:</label>
<input type="text">

<br><br>

<label>Email:</label>
<input type="email">

<br><br>

<input type="submit" value="Submit">

</form>
```

## Common Input Types

- text
- email
- password
- number
- radio
- checkbox
- date
- file
- submit

### Exam Tip

**<form>** = Creates a form

**<input>** = Takes user input

**<label>** = Displays field name

**type** = Defines the input type

## Semantic HTML

Semantic HTML uses meaningful tags that clearly describe the purpose of different parts of a webpage. It improves readability, SEO and accessibility.

## Common Semantic Tags

- <header> → Page Header
- <nav> → Navigation Menu
- <main> → Main Content
- <section> → Section of Content
- <article> → Independent Article
- <footer> → Page Footer

## HTML5 Features

- Supports Audio & Video
- Semantic Tags
- Canvas for Graphics
- Better Forms
- Local Storage
- Cross-platform Support

### Exam Tip

HTML5 is the latest version of HTML and provides many modern features for web development.

## Interview Questions

**Q1:** What is HTML?

**Answer:** HTML is the standard markup language used to create web pages.

---

**Q2:** What is the difference between HTML and HTML5?

**Answer:** HTML5 provides new semantic tags, multimedia support, canvas, local storage and improved forms.

---

**Q3:** What are semantic tags?

**Answer:** Semantic tags clearly describe the purpose of webpage content, such as <header>, <section> and <footer>.

## Final Quick Revision Sheet

**HTML Full Form:** HyperText Markup Language

**Latest Version:** HTML5

**Used For:** Creating Web Pages

**Main Tags:** html, head, body

**Lists:** ol, ul, li

**Tables:** table, tr, th, td

**Forms:** form, input, label
