JavaScript Chapter 1

Introduction to JavaScript

Learn JavaScript basics, syntax and important concepts with easy examples.

 Did You Know?

JavaScript was created by Brendan Eich in 1995. It became one of the most important languages for making websites interactive.

 What is JavaScript?

JavaScript is a programming language used to make web pages interactive and dynamic. It works together with HTML and CSS to create modern websites and web applications.

 Why do we use JavaScript?

- Create interactive websites
- Add animations and effects
- Handle user actions
- Validate forms
- Change webpage content dynamically

Features of JavaScript

- Easy to Learn
- Runs in Web Browsers
- Makes Websites Interactive
- Supports Object-Oriented Programming
- Works with HTML and CSS

JavaScript Syntax

JavaScript syntax defines the rules for writing JavaScript code. A JavaScript statement usually ends with a semicolon.

```
let message = "Hello JavaScript";  
console.log(message);
```

First JavaScript Program

The following example displays a message in the browser console.

```
console.log("Hello World");
```

Adding JavaScript to HTML

JavaScript can be added inside HTML using the script tag.

```
<script>  
alert("Welcome to JavaScript");  
</script>
```

Where JavaScript Runs?

- Web Browsers
- Servers using Node.js
- Mobile Applications
- Desktop Applications

Common Mistakes

- Writing incorrect syntax
- Missing brackets

- Using wrong variable names
- Ignoring case sensitivity

Interview Questions

Q1: What is JavaScript?

JavaScript is a programming language used to create interactive websites.

Q2: Who created JavaScript?

Brendan Eich created JavaScript in 1995.

Q3: Is JavaScript a programming language?

Yes, JavaScript is a programming language.

Q4: Which languages work with JavaScript?

HTML and CSS work together with JavaScript.

Quick Revision

Created By: Brendan Eich

Created In: 1995

Used For: Website Interactivity

Works With: HTML & CSS
