

JavaScript Chapter 3

Operators & Expressions

Learn JavaScript operators, expressions and how to perform different operations with examples.

[Home](#)[Web Development](#)

 Did You Know?

Operators are symbols that tell JavaScript to perform specific operations on values. They are used in calculations, comparisons and decision making.

 What are JavaScript Operators?

JavaScript Operators are special symbols used to perform operations on variables and values. For example, addition, subtraction, comparison and logical operations.

Types of JavaScript Operators

JavaScript provides different types of operators:

- Arithmetic Operators
- Assignment Operators
- Comparison Operators
- Logical Operators
- Increment & Decrement Operators

Arithmetic Operators

Arithmetic operators are used to perform mathematical calculations.

Operator	Purpose
+	Addition

-	Subtraction
*	Multiplication
/	Division
%	Modulus (remainder)

Arithmetic Example

```
let a = 10;  
let b = 5;  
console.log(a + b);  
console.log(a * b);
```

Assignment Operators

Assignment operators are used to assign values to variables.

Operator	Example
=	x = 10
+=	x += 5
-=	x -= 5

Comparison Operators

Comparison operators compare two values and return true or false.

- == Equal to
- === Strict equal to
- != Not equal
- > Greater than
- < Less than

Comparison Example

```
let age = 20;  
console.log(age >= 18);
```

Logical Operators

Logical operators are used to combine multiple conditions.

Operator	Meaning
&&	AND
	OR
!	NOT

Increment & Decrement Operators

These operators increase or decrease a value by one.

```
let count = 5;  
count++;  
count--;
```

Common Mistakes

- Using = instead of == for comparison
- Forgetting operator symbols
- Using wrong operator for calculation
- Confusing && and ||

Interview Questions

Q1: What are JavaScript Operators?

Operators are symbols used to perform operations on values.

Q2: Which operator is used for addition?

+ operator

Q3: Difference between == and ===?

== checks value while === checks value and data type.

Q4: Name any two logical operators.

&& and ||

Quick Revision

Arithmetic: +, -, *, /

Assignment: =, +=, -=

Comparison: ==, ===, !=

Logical: &&, ||, !
