JavaScript Chapter 6

JavaScript Events

Learn JavaScript Events, Event Listeners and User Interactions with practical examples.

 Did You Know?

Almost every interactive website uses JavaScript Events to respond to user actions.

 What are JavaScript Events?

JavaScript Events are actions performed by users or browsers. Events allow websites to respond when users click, type, scroll or move the mouse.

 Why do we use Events?

- Make websites interactive

- Respond to user actions
- Handle forms
- Create dynamic webpages
- Improve user experience

Common JavaScript Events

Event	Description
click	Occurs when user clicks
dblclick	Double click event
mouseover	Mouse moves over element
mouseout	Mouse leaves element
keydown	Key is pressed
keyup	Key is released
submit	Form submission

change	Input value changes
--------	---------------------

Click Event Example

Event Listener

Event Listeners are the modern way to handle events.

```
document.getElementById("btn")  
.addEventListener("click",function(){  
  alert("Button Clicked");  
});
```

```
});
```

Keyboard Event

```
document.addEventListener("keydown",function(){  
  console.log("Key Pressed");  
});
```

Mouse Event

```
document.getElementById("box")  
  .onmouseover=function(){  
    console.log("Mouse Enter");  
  }
```

Form Event

```
document.querySelector("form")  
  .addEventListener("submit",function(){  
    alert("Form Submitted");  
  });
```

Advantages

- Interactive webpages
- Better user experience
- Dynamic content
- Real-time responses
- Modern web applications

Common Mistakes

- Wrong event name
- Missing function brackets
- Selecting wrong element
- Writing JavaScript before HTML loads

Interview Questions

Q1: What is a JavaScript Event?

An action performed by the user or browser.

Q2: Which event occurs when a button is clicked?

click

Q3: Which method is preferred for handling events?

addEventListener()

Q4: Name two keyboard events.

keydown and keyup

Quick Revision

Click onclick

Keyboard keydown

Mouse mouseover

Modern Method addEventListener()
