

JavaScript Notes

Learn JavaScript from basics to advanced concepts with easy examples.

[Open Chapter →](#)[Open Chapter →](#)

Did You Know?

JavaScript was created by **Brendan Eich** in 1995. It is one of the most popular programming languages used for web development.

Introduction to JavaScript

JavaScript is a programming language used to make websites interactive. It adds dynamic features like animations, buttons, form validation and interactive content.

What is JavaScript?

JavaScript is a scripting language that runs inside web browsers. It works together with HTML and CSS to create modern web applications.

Features of JavaScript

- Easy to Learn
- Runs in All Modern Browsers
- Makes Websites Interactive
- Supports Object-Oriented Programming
- Works with HTML and CSS

Variables & Data Types

Variables are used to store information in JavaScript. JavaScript has different types of data values.

- String
- Number
- Boolean
- Array
- Object
- Undefined

Example

```
let name = "Noor";  
  
let age = 20;  
  
let isStudent = true;
```

Functions in JavaScript

Functions are reusable blocks of code that perform a specific task. They help developers write clean and organized programs.

Example

```
function greet(){  
  console.log("Hello Noor");  
}
```

Loops in JavaScript

Loops are used to repeat a block of code multiple times. Common loops are:

- for loop
- while loop

- do while loop

DOM Manipulation

DOM (Document Object Model) allows JavaScript to access and modify HTML elements dynamically.

Example

```
document.getElementById("heading");
```

JavaScript Events

Events are actions performed by users on a webpage.

- Click Event
- Submit Event

- Change Event
- Mouseover Event
- Keyboard Event

ES6 Features

- let and const
- Arrow Functions

- Modules

JavaScript Interview Questions

Q1: What is JavaScript?

JavaScript is a programming language used to create interactive websites.

Q2: What are variables?

Variables store data values in a program.

Q3: What is DOM?

DOM allows JavaScript to interact with HTML elements.

Q4: Difference between let and const?

let value can be changed while const value cannot be reassigned.

 Final Quick Revision

Created By: Brendan Eich

Created In: 1995

Used For: Website Interactivity

Works With: HTML & CSS

Main Concepts: Variables, Functions, DOM, Events
