

 Did You Know?

React was developed by Facebook (now Meta) in 2013. Today, it is one of the most popular JavaScript libraries for building user interfaces.

 What is React?

React is a JavaScript library used to build fast, interactive and reusable user interfaces (UI). It helps developers create modern web applications using reusable components.

 Why do we use React?

- Creates reusable components
- Fast rendering with Virtual DOM
- Easy to maintain large applications
- Improves user experience
- Widely used in modern web development

Features of React

Feature	Description
Component-Based	Build UI using reusable components
Virtual DOM	Updates only changed parts of the webpage
JSX	Write HTML inside JavaScript
One-Way Data Binding	Data flows in one direction
Reusable Code	Write once and use multiple times

React Virtual DOM

React uses a Virtual DOM to improve performance. Instead of updating the whole webpage, React updates only the elements that have changed.

Creating a React Component

```
function Welcome(){  
  return  
  Hello Noor  
  ;  
}
```

Why is React Popular?

- Easy to learn
- High performance

- Reusable code
- Large community support
- Used by companies like Meta, Netflix and Airbnb

Applications of React

- Single Page Applications (SPA)
- Dashboard Systems
- E-commerce Websites
- Social Media Platforms
- Portfolio Websites

Common Mistakes

- Thinking React is a programming language
- Confusing React with React Native

- Ignoring component structure
- Not using reusable components

Interview Questions

Q1: What is React?

React is a JavaScript library used for building user interfaces.

Q2: Who developed React?

Facebook (Meta).

Q3: What is Virtual DOM?

A lightweight copy of the real DOM that updates only changed elements.

Q4: Why is React popular?

Because it is fast, reusable and component-based.

Quick Revision

Released: 2013

Developed By: Facebook (Meta)

Main Purpose: Build User Interfaces

Special Feature: Virtual DOM
