React Chapter 2

JSX

Learn JSX syntax, expressions and how React combines HTML with JavaScript.

 Did You Know?

JSX stands for JavaScript XML. It allows developers to write HTML-like code inside JavaScript.

 What is JSX?

JSX is a syntax extension for JavaScript used in React. It makes writing user interface code easier because it looks similar to HTML.

 Why do we use JSX?

- Easy to read and write

- Looks like HTML
- Improves code readability
- Supports JavaScript expressions
- Works directly with React components

Features of JSX

Feature	Description
HTML-like Syntax	Looks similar to HTML
JavaScript Support	Allows JavaScript expressions
Readable Code	Easy to understand
Reusable	Works with React components

JSX Example

```
const element =
```

```
  Hello Noor  
;
```

JavaScript Expression in JSX

JavaScript expressions are written inside curly braces {}.

```
const name = "Noor";
```

```
Hello {name}
```

Rules of JSX

- Only one parent element
- Close every tag
- Use className instead of class
- Write JavaScript inside { }

Multiple Elements Example

Welcome

React JSX Example

Advantages of JSX

- Cleaner code
- Easy debugging
- Readable syntax
- Supports dynamic content
- Fast UI development

Common Mistakes

- Using multiple parent elements
- Forgetting closing tags
- Using class instead of className
- Missing curly braces for expressions

Interview Questions

Q1: What is JSX?

JSX is a syntax extension that allows HTML-like code inside JavaScript.

Q2: What does JSX stand for?

JavaScript XML

Q3: Which attribute replaces class in JSX?

className

Q4: How do you write JavaScript expressions in JSX?

Inside curly braces { }

Quick Revision

Full Form JavaScript XML

Looks Like HTML

Expression { }

CSS Attribute className
